

COMPANY

Konch

PROJECT TITLE

Audio and Video ML @ Konch.AI

PROJECT DESCRIPTION

Konch is a early stage, high-impact company focusing on improving human interactions at the work place. Tools developed at Konch will aid large businesses in providing a peer-to-peer messaging platform to boost productivity. Our unique vision is to couple this with the power of machine learning, where we will provide sentiment analysis information along with the peer messaging. For this reason, we are interested in students motivated and interested in audio speech recognition and sentiment analysis, working with the latest deep learning architectures. Interested candidates will be working on cutting edge technology in multimedia by providing meta-information to our communication tool. The created meta layer will enable users to search old texts, analyze exchanges to measure/optimize communication against their goals, summarize texts to save time, and prioritize tasks based on importance. This opportunity will enable a first-hand look at enterprise services and the agile experience of startups.
